FISCHER PRECISE USA PRESENTS THE WIDEST RANGE OF SPINDLE SOLUTIONS AT EASTEC

Racine, Wisconsin, USA- March 29, 2006 EASTEC May 23-25 2006 Fischer Precise USA will show its wide range of spindle solutions in Booth #3004 at the Eastern States Exposition Grounds in West Springfield, MA. Fischer Precise USA has been created from the recent union of two highly respected companies, Fischer Ag and The Precise Corporation, to create a strong player for high performance spindles used in machine tools. The result is an unprecedented capability to provide the customer the benefit of the widest range of technology-driven spindle solutions from a single source, not only in terms of manufactured products but also responsive service and support programs.

Customers can now specify cost effective spindle solutions based on the full range of the combined Fischer and Precise product lines: spindle speed up to 200,000 rpm, power output up to 100 kW, and choice of ball bearing, air bearing, or hydrostatic bearing with worldwide support.

One unique capability featured at EASTEC will be liquid shaft cooling. The benefits of liquid shaft cooling to the spindle user include higher parts accuracy, greater machining reliability, and longer spindle durability because of the optimization of stable shaft temperature during cutting. In addition to information at the Fischer Precise USA booth, a free presentation further describing this capability will be given at EASTEC on Tuesday May 23rd at the Smart Machining Resource Center.

Beyond hardware product and turnkey spindle packages, Fischer Precise USA can also provide spindle service, training, and support solutions to optimize existing manufacturing applications. Fischer Precise USA is ready to assist and provide spindle users our full resources in their machining or grinding processes.
