**PRECISE CORPORATION TO PRESENT LEADING EDGE SPINDLE TECHNOLOGIES AT EASTEC 2005**

Racine, WI – March 11, 2005 . . . The Precise Corporation invites you to see the latest exciting high speed spindle offerings during EASTEC May 24-26 in the **precise** booth #3315 where you can discover more about your **Productivity Need Fulfilled with High Speed**. Our key markets to help provide solutions include:

**Mold & Die.** In the tire mold industry, precision machining is of absolute necessity to provide a reliable and safe product for consumers. With the assistance of **precise** application engineers, in coordination with the customer machine design team, the Type SC 4082 series spindle operable to 40,000 rpm was configured as a solution that met all expectations to meet increasing production needs and to improve accuracy and repeatability. You can see and learn more about this application in our booth. ***Productivity Need Fulfilled with High Speed.***

**Aerospace.** By incorporating **precise** high speed spindles with synchronous motor technology, aircraft manufacturers worldwide are able to take advantage of much greater productivity drilling and machining precision holes and routing of aluminum, composite, and titanium components. With this motor technology, torque output can be doubled as compared to a spindle design based on conventional asynchronous ac induction motors. See two different high speed spindles incorporating synchronous permanent magnet motors in our booth. Another ***Productivity Need Fulfilled with High Speed.***

**Medical. Automotive. Electronics.** Additional markets all served with **precise** high speed spindle systems. We look forward to providing you a highly productive, high speed machining solution. We trust that you will see **precise** as the reliable partner for your high speed spindle needs, and look forward to talking with you in booth #3315.

Precision, power, and performance are the key features in all of **precise**'s high speed spindle products. Further information on these features and the entire product line can be found in booth #3315.
