TREK BICYCLES USES PRECISE FOR TOUR WINNING PERFORMANCE

Racine, Wisconsin, USA- October 20, 2004 The Precise Corporation, manufacturer of high speed spindle systems, is proud to announce the results of its Trek bicycle drawing and fundraising for the Lance Armstrong Foundation during the recent International Manufacturing Technology Show (IMTS).

Trek bicycles uses **precise** high speed spindle products for precision milling of its OCLV carbon fiber frame components. Many visitors were able to take advantage of the rare opportunity to ride the identical model OCLV carbon-fiber bike that Lance Armstrong used in the 2004 Tour de France and help support the fight against cancer at the same time. Approximately 60 miles were ridden during the show at a contribution rate of \$5/mile, above and beyond additional direct cash donations. **precise** would like to thank all of our IMTS visitors who participated.

precise is pleased to announce the Grand Prize winner of the Trek Bike giveaway drawing:

David Dahlheimer, Donatelle Plastics, Inc., New Brighton, MN

The winner of a new Trek bike seat is: Stephen Etringer, Oregon State University, Corvallis, OR

And the winner of a Trek odometer is: Bill Defley, Greystone Inc., Jamestown, RI

precise would also like to extend many thanks to our good customer, Trek Bicycles (Waterloo, WI), for all of their assistance.

The Precise Corporation is a leading manufacturer of precision, high speed spindles for integration into machine tools. The firm serves customers throughout the world. Manufacturing operations are in Racine, Wisconsin, USA, and Leichlingen, Germany.
